

How to fix sound in Nexus 7 (2012) after replacing charging port

No sound from speaker after changing charging port, only alarms work with speaker, no app sound

Written By: vipin mehta

INTRODUCTION

I had same problem with nexus 7(2012) after changing charging port with headset port combo, as charging port had given up.

The third party headset port does not auto detect headphones properly and keeps headphone on when they are not connected. So Android os keeps external speaker off thinking headphones are in, for all apps except alarm.

Fix:

Download headset toggle from Google play to override the autodetect headphones and route audio via it. Others have used sound about app from Google play for same fix.

Hope it helps someone.

To reassemble your device, follow these instructions in reverse order.
